

ELMO Portable Foamer

Economical
Low
Maintenance
Operation

ELMO has been helping control chemical consumption in food processing plants and industrial plants since 1982. If you are interested in saving money on chemical and labor cost, you will want to have a look at ELMO.

- ◆ **Control Panel** Set chemical pressure and water pressure for the mixture you want. "ELMO" does the mixing.
- ◆ **Locking Regulators** You can set "ELMO" to use the right amount of chemical for a job and lock the settings to prevent unauthorized over-use of chemical.
- ◆ **Glycerin Filled** pressure gauges.
- ◆ **Rugged stainless steel cart** with nylon wheels for years of service.
- ◆ **50 foot foam discharge hose** with dual nozzles. Use fan tip nozzle for close up work. Use straight tip for foaming at a greater distance.
- ◆ **Two gallon ASME** stainless steel chemical tank. Foam continuously for up to 1 hour with a tank of chemical (foaming time depends on chemical mixture).
- ◆ Operates on as little as 30 pounds of water pressure.
