

AccuDose™ dispensers are an economical way to dispense a wide variety of automatically diluted solutions into spray bottles, buckets or other containers at the touch of a button. Dilution is controlled by drawing chemical through metering tips of varying size and injecting this metered amount into the water flow.

Standard models are available with any combination of low and high flows in one, two and three product configurations.

Keep any reservoir filled with consistently mixed solution without pouring, stirring, waiting or downtime. When the solution level in a reservoir drops, the HydroMinder's float opens a non-electric magnetic valve. The flow of water siphons liquid concentrate into the water stream, automatically maintaining the level of ready-to-use solution. When the tank reaches the preset fill level, the HydroMinder shuts off.

HydroMaster drum or wall mounted proportioners automatically mix liquid cleaning and sanitizing concentrates with water and dispense the diluted solution into any container (auto scrubber, mop bucket, jugs, etc).
